- None reported.

WEATHER OF CONCERN

Weather of Concern

- Heavy amounts of precipitation are forecast across Northern California into next week. Rising snow levels and heavier rain will lead to increasing potential for flooding issues over the weekend and early next week.
- Heavy rain has caused the National Weather Service to issue several flash flood products in the Bay Area this morning.
- Moderate to heavy rains currently overspread the Central Coast moving south and will affect Ventura and Los Angeles Counties by tomorrow.
- An atmospheric river will bring the potential for heavy rainfall across Central and Southern California sometime between late Saturday and Monday.

Active Weather Warnings, Watches and Advisories by County:

http://www.wrh.noaa.gov/sto/brief/wwa_bc_cal.php

WEATHER SYNOPSIS BY REGION

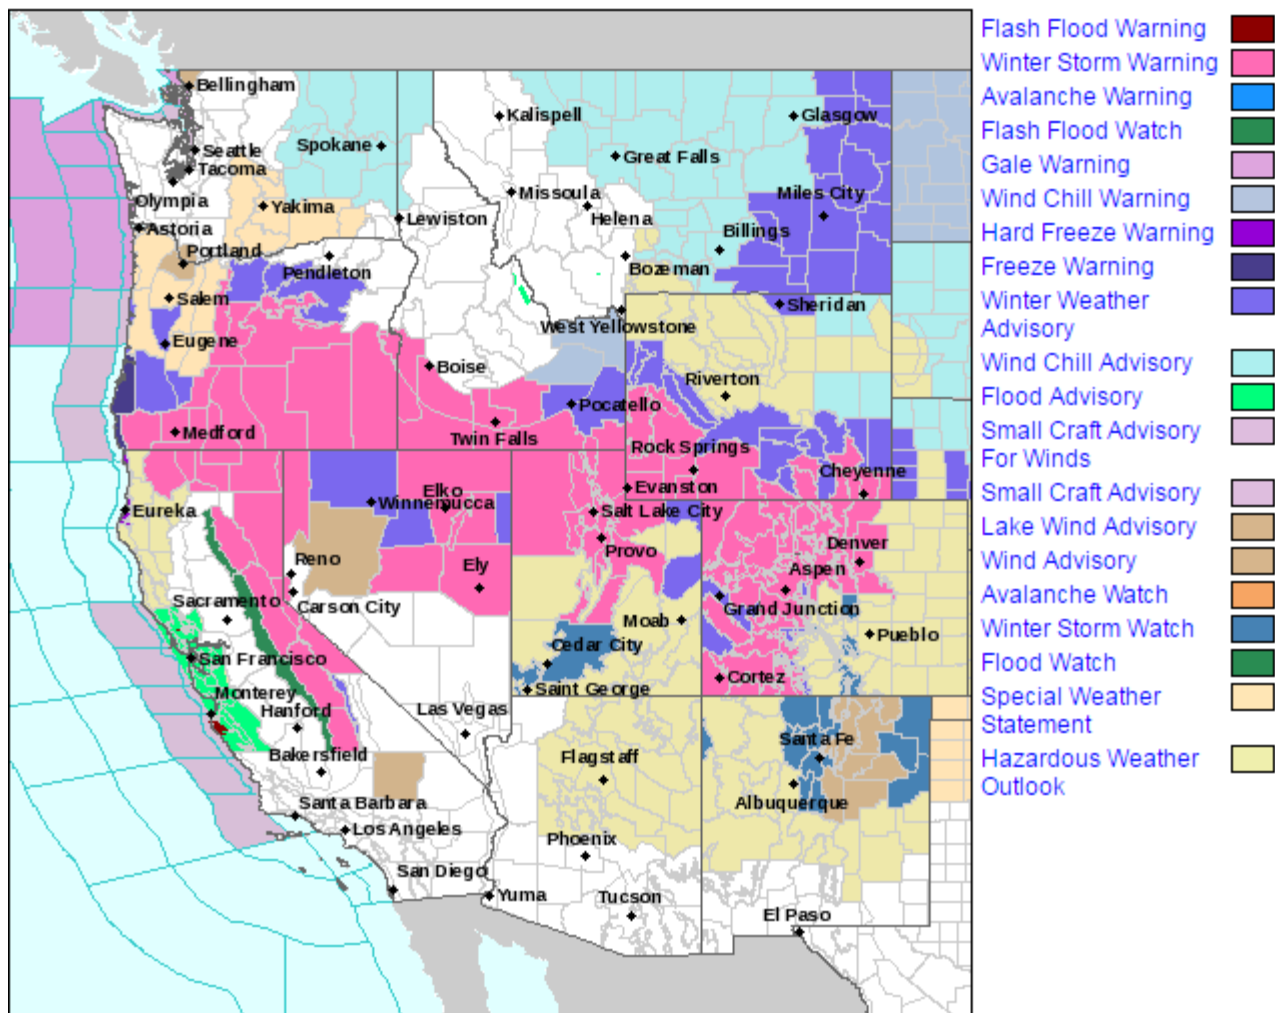

NORTHERN CALIFORNIA

The recent weather pattern of dry and warm afternoons and cold mornings will shift to one with gusty winds, mostly cloudy skies and light precipitation in a fairly cold air mass. This pattern will exist through today as a series of cold low pressure systems drop in from the north. Light precipitation will continue in most areas today, ending first in northwestern areas and finally ending in southeastern areas early tomorrow. Overnight lows may drop to the mid 20s in the Sacramento Valley to just below zero in the higher mountain valleys beginning tomorrow.

SOUTHERN CALIFORNIA

Zonal flow will bring scattered showers with light rainfall totals from a Monterey/Fresno County line northward through this afternoon. Moisture will increase this evening bringing heavy rain to most of Central California through Thursday morning. Scattered showers with light rainfall totals will occur across Southern California this evening through tomorrow evening. Rainfall totals will be between 3 and 6 inches across the foothills and mountains of Central California and between 0.50 and 1.50 inches across the rest of Central California through Thursday evening. Most of Southern California will receive less than a quarter inch of rainfall this evening through tomorrow evening. The snow level will be around 7,000 feet. South to west winds of 15 to 25 mph with gusts to 40 mph will surface across the wind prone mountain and desert areas through this morning and then increase to 20 to 40 mph with gusts to 60 mph this afternoon through Thursday evening. Temperatures will be near normal through Thursday, with 40s to low 50s across the mountains and mid 50s to mid 60s in the valleys. A weak ridge of high pressure will bring a little warmer and dry conditions to the entire region Friday. Zonal flow will set up again this weekend through early next week bringing heavy rainfall to Central California through the period. Southern California will likely remain dry for much of the weekend and then heavy rain will be possible Sunday night through early next week. The snow level will rise to around 10,000 feet this weekend and then drop back down to around 7,000 feet early next week. South to west winds of 20 to 30 mph with gusts to 50 mph will surface across the mountain ridges and desert passes Saturday afternoon through early next week. Temperatures will be a little above normal this weekend and then cool to near normal early next week.
